

eCSD - Electronic Consignment Security Declaration

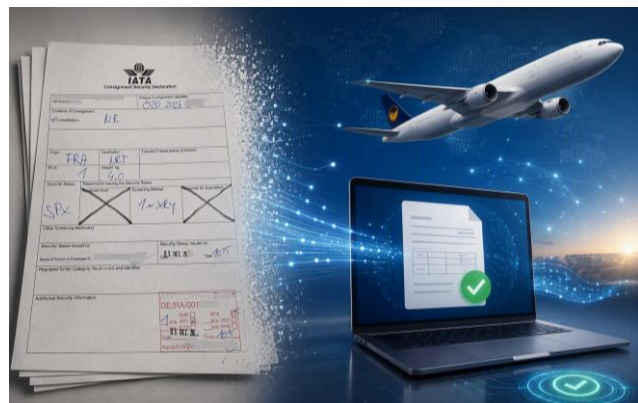

Fast, secure and simple

Provide your Security Status data electronically

What is the eCSD?

The electronic Consignment Security Declaration (eCSD) is the digital version of the security declaration for air cargo shipments according to IATA Resolution 651. It records how your shipment has been secured throughout the supply chain.

eCSD is already supported in several countries and regions worldwide and continues to expand. For the latest information on participating countries and implementation status, please refer to the IATA information pages. eCSD is transmitted directly via the electronic air waybill (e.g. FWB/XFWB/ONE Record) – fast, transparent, and auditable at any time.

One easy step to use eCSD

Provide security information in a structured format in the electronic air waybill (FWB/XFWB/ONE Record) or via “eAWB Data Capture” from Lufthansa Cargo.

- ✓ Faster process
- ✓ Maximum transparency
- ✓ Enhanced security
- ✓ Easy archiving

Why switch to eCSD now?

Benefit from an efficient, secure, and modern air cargo process. Until now, security information is often provided in paper form only at the time of delivery, causing delays: manual checks, updates, and corrections take time and increase the risk of errors. With eCSD, Security Status data is automatically and structured in the electronic air waybill message – directly at dispatch and without delay.
